

XM Satellite Radio is very beneficial to us in its current form. Please do not take pieces of it away. We are on the road often and satellite radio is the only way we can have access to the information we need while traveling, including weather, CNBC for financial information, and Watercolor channel for smooth jazz music--all in one location without hunting for a signal for hours whether in mountains or in the vast spaces out west. We have not found this variety and quality of listening anywhere else and have been so happy with the quality and variety of information available on satellite radio. The natural market influences are working here so please do not change it. I pay for what I want to hear and do not want that format dictated to me by the National Association of Broadcasters. I respectfully urge the FCC to reject the NAB's petition 04-160. Please support XM's ability to provide the kind of programming that I have found and deserve to continue to receive! e.
